

Praxeme & CEISAR Common Glossary [en]

CEISAR (Center of Excellence in Enterprise Architecture) and the **Praxeme Institute** joined forces and published a **common glossary** with a selection of terms in the field of enterprise transformation.

By converging our vocabularies, we intend to ease the communication with business and to facilitate training for enterprise architects and other transformation agents.

Find the glossary at the URL: <http://wiki.praxeme.info/uploads/Thesaurus/THS02-CeisarPraxemeGlossary.pdf>

Enterprise Transformation Manifesto [en]

Guidance for the responsible enterprise

The **Praxeme Institute** has published a document which summarizes its philosophy:

<http://enterprisetransformationmanifesto.org/>

This document is aimed at all the different functions of the enterprise (in the broadest meaning that we give to this term), in particular:

- executive management, who will find within, a unified discourse and list of principles to guide their transformation programs;
- communication or marketing directors, for whom signing the manifesto will be seen as a way of affirming certain values of their enterprise;
- IT directors and more specifically within the IT department, the transversal functions who will appreciate the repositioning of enterprise architecture.

The manifesto will also be of interest to the academic world, calling for of a multidisciplinary approach, around which teaching content can be organized (please refer, in particular, to chapter 7).

Two documents are available to date:

the **manifesto** (<http://www.enterprisetransformationmanifesto.org/EnterpriseTransformationManifesto.pdf>) itself, a list of principles which guide enterprise transformation;

the **comment** (<http://www.enterprisetransformationmanifesto.org/ETMComments.Praxeme.pdf>) on the document made by the *Praxeme Institute*.

For the enterprises that relate to and see themselves in this text, it offers an opportunity to communicate and affirm their values. Details regarding the terms and conditions of the endeavor can be found at the end of the manifesto.

Modeling commented exercise [fr]

A very deeply analyzed short problem of semantic modeling by **dvau**. The explanation is complete and the result shows the richness and rigor of a design approach:
